

CHECK FOR BEES?

WHAT IS BEEWHERE

BeeWhere is a collaborative initiative that streamlines communication between beekeepers, PCAs, growers, and pesticide applicators using modern technology. It employs innovative mapping tools that enables beekeepers and pesticide applicators to share best practices by tracking and safeguarding hive locations across the state.

Beekeepers: have access to a free registry and location tracking tools through BeeWhere. Both options – Fieldwatch (including their new BeeCheck App) and CalAg Permits - give beekeepers access to register their initial hive location(s) upon entry to California and any subsequent movement of locations within 72 hours throughout the season.

Applicators: have a new way to perform a bee check. This tool provides applicators in-depth access to hive locations for 48-hour notification purposes through BeeCheck in CalAg Permits. In the future, BeeWhere will interface with current crop management tools, such as Agrian and CDMS, to perform a bee check without switching websites.

Help us with Outreach and Education on this new tool to stay compliant with registration and bee checks during pollination as well as when pesticides labeled toxic to bees are being applied around a blossoming plant. For more information and resources visit www.beewherecalifornia.com
