AND

THE HONORABLE BOARD OF SUPERVISORS
COUNTY OF TULARE

LeRoy Swiney, Chairman
Lori Mangine
John R. Conway
Clyde R. Gould
Ben Webb

John Mc Clure
County Executive Officer

Gentlemen:

In accordance with the provisions of Section 2779 of the California Agricultural Code. I am pleased to submit the Annual Agricultural Crop Report of the acreage, production and valuation of the agricultural commodities produced in Tulare County during the calendar year 1982.

This report is the result of information gathered from many sources, and as always, it must be emphasized that the figures are gross returns to the producer and do not indicate actual net profit.

I wish to express my sincere appreciation to all the producers, processors and agencies, both private and governmental, who assisted in compiling this report. I would also like to thank all the members of my staff, without whose input, the publication of this report would be impossible.

Respectfully submitted,

Clyde R. Churchill

Clyde R. Churchill
Agricultural Commissioner/Sealer

VALLEY OAK

In November 1852 a small party of settlers entered the present day Visalia area and established the first valley town between Stockton and Los Angeles. They chose a site in what was then the largest Valley Oak Woodland in the state. It was four to six miles wide and spread for 25 miles along the Kaweah River Delta from the base of the Sierra Nevada foothills to Tulare Lake. The oaks provided relief from the extreme summer temperatures and fuel in the winter months, while their free roaming cattle, sheep, and pigs eagerly consumed the annual acorn crop and browsed saplings and seedlings.

Experimental plantings of deciduous fruit and citrus trees followed the construction of irrigation and flood control facilities in the early 1880's. Their success resulted in the clearing of great expanses of oak woodland to make way for larger plantings, thus altering the simple perception of the Valley Oak as a benevolent supplier of resources. Oaks, though still considered a desirable feature of a site, were now valued as an indicator of fertile alluvial soils. Once acquired, the land was promptly cleared of these living soil gauges and planted to fruit trees and other crops.

The cutting of oaks for crops and firewood for Tulare County's growing population was so extensive that the elimination of the woodland was in sight by the late 1890's. This stimulated proposals to preserve areas of woodland. An example of this came in an 1899 editorial in the Visalia Delta newspaper;

"...The majestic oaks are rapidly disappearing under the ax of the woodsman and no trees are being planted in their place. These oaks were once the glory and beauty of this section of the country and were of great relief to a visitor who had crossed miles of plain to reach our city. Should the destruction of timber proceed another 10 years oak trees will become a rarity and the county will not prove as inviting as in former days.

The movement to preserve the Valley Oak coincided with a period of heightened awareness of natural resources throughout the United States. It was during this time that the National Park and Forest systems were established. The efforts of men such as George Stewart, editor of the Visalia newspaper, were instrumental in protecting the Giant Sequoia with the establishment of Sequoia National Park in eastern Tulare County in 1891.

The attitude which surfaced during this period focused on the cultural resources provided by the Valley Oak. As exploitation increased, the tree was recognized as a renewable source of community pride and identity. No longer was it solely viewed as a disposable provider of fuel and forage, or as an indicator of good soil.

By 1909 arrangements had been made to preserve 100 acres of woodland south of Visalia. It was sold by the Mooney family for the value of the firewood, \$15,000. A stipulation that no oaks would be removed was included in the terms of the sale. Today Mooney Grove County Park is one of the largest remnants of Valley Oak Woodland in the state.

Several community groups organized the first tree planting program along the western entrance to Visalia in 1922. Today, approximately one hundred of those oaks line 5 miles of Highway 198, welcoming the travel weary visitor and homebound native. Despite similar efforts, oaks continue to disappear in the expanding city. In response, an ordinance was passed in 1971 requiring a permit to remove a tree. The regulation was amended in 1977 to include a \$500 fine. This action was largely due to the efforts of a citizens group called the Oak Tree Committee.

Currently, planting programs and preservation schemes will assure the presence of oaks in Tulare County for future generations. The city of Visalia has been planting nearly 200 acorns and seedlings a year on public grounds since the mid 1970's. Acorns and seedlings are also provided to citizens without charge by the city. The Visalia Beautification Committee (an outgrowth of the Oak Tree Committee) has been involved in several planting programs. Recently over 15,000 acorns were received from the public to complete a planting along Highway 198. The purchase of 328 acres of woodland northeast of Farmersville by a coalition of local groups and The Nature Conservancy (a national land trust organization) has further assured the continued existence of this valuable resource. The area will remain undeveloped, and be used as an educational facility for the local schools and the general public.
